

FERNS AND PETALS SALES ANALYSIS

Project Overview

This project analyzes the sales performance of Ferns and Petals, an online gifting company. The objective of the project is to identify sales trends, customer purchasing patterns, product performance, and revenue insights through an interactive Excel dashboard.

The project was developed using Microsoft Excel and involved data cleaning, transformation, analysis, and visualization to support business decision-making.

Dataset Used

The analysis was performed using multiple datasets:

- Orders Data
- Customers Data
- Products Data

Tools and Techniques Used

- Microsoft Excel
- Power Query
- Pivot Tables
- Pivot Charts
- Slicers
- Dashboard Design

Data Preparation

Power Query was used to:

- Import data from multiple datasets
- Clean and transform the data

- Handle data inconsistencies
- Prepare the data for analysis

Dashboard Insights

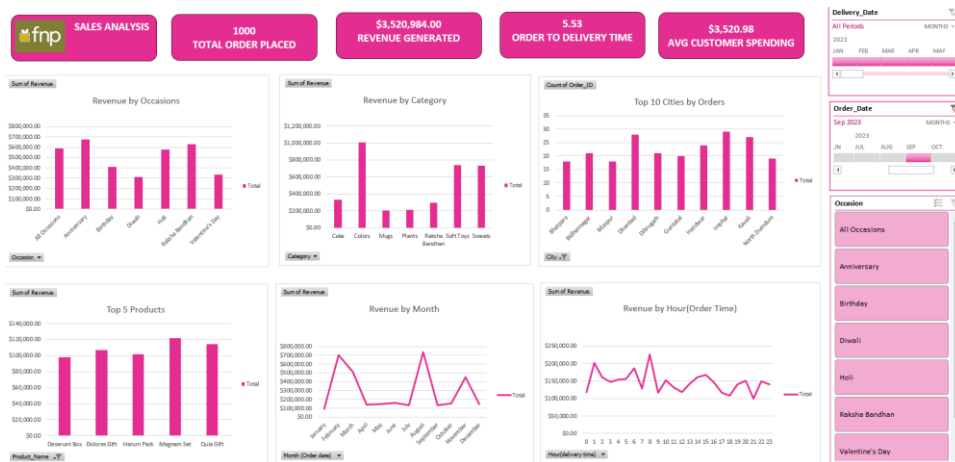

The dashboard provides insights into:

- Total Orders Placed
- Total Revenue Generated
- Average Customer Spending
- Average Order-to-Delivery Time
- Revenue by Occasion
- Revenue by Category
- Top 10 Cities by Orders
- Top 5 Products by Revenue
- Monthly Revenue Trends
- Revenue by Order Hour

Key Features

- Interactive dashboard with slicers
- Dynamic filtering and analysis
- Business-focused KPI tracking
- Sales trend visualization
- Customer and product performance analysis

Dashboard Preview

Conclusion

This project demonstrates the use of Excel for data cleaning, transformation, analysis, and visualization. By combining Power Query, Pivot Tables, Charts, and Slicers, the dashboard provides meaningful insights into sales performance and customer behaviour.
